Company Founder Rejoins SonTek/YSI

San Diego, CA - Company founder Ramon Cabrera has returned to SonTek/YSI to lead special product technology projects.

Mr. Cabrera -- who has training in ocean engineering, computer science, and physics -- co-founded SonTek in 1992 after leading research and development at RD Instruments. His goal was to produce high-quality acoustic Doppler current meters for flow measurement. Through his technical expertise and creative problem-solving, he grew SonTek into a leader in the water velocity measurement industry.

"Ramon was involved in the conception of almost every acoustic Doppler instrument on the market today," observes Rick Omlor, President & CEO of YSI Inc., SonTek/YSI's parent company. "He has the uncanny ability of taking extremely complex systems and making them operational for the every day user trying to collect good data."

In 2001 Cabrera sold the company to YSI and remained on board during the transition period. After a hiatus, he has returned to SonTek/YSI as a technical resource.

SonTek manufactures affordable, reliable acoustic Doppler instrumentation for water velocity measurement in oceans, rivers, lakes, harbors, estuaries, and laboratories. YSI, an employee-owned company, manufactures a full line of both handheld and benchtop instruments for measuring water quality. It also manufactures multiparameter, real-time monitoring systems for environmental applications.

###

SonTek/YSI, founded in 1992 and advancing environmental science in over 100 countries, manufactures affordable, reliable acoustic Doppler instrumentation for water velocity measurement in oceans, rivers, lakes, harbors, estuaries, and laboratories. Headquarters are located in San Diego, California. Additional information can be found at www.sontek.com.
